

A 27 year old woman with an uncertain number of pregnancies [3 living children ages 2, 4 and 5] was brought to the main women's hospital in Yangon from a village approximately 50 miles north of the city by relatives. She was unresponsive with a temperature of 39 C. Physical exam was significant for generalized muscle fasciculations, hyperactive reflexes and gross blood tinged pus in her vagina. Uterus was approximately 10 weeks size and boggy. Breathing was shallow and labored. Pupils were reactive to light. She was taken to the medical intensive care unit and intubated, and IV fluids were begun.
